Vrijdag 10:42

**uren** **minuten** **zomertijd**

### Klok helderheid (0 <-> 15)

**Clock**

Large and clear display.

Internal clock synchronized 2 x day with NTP server.

Time zone and winter / summer time correction manually via web page.

Adjustable clock display brightness.

**clock radio**

3 programmable alarms

\* certain day

\* daily

\* weekdays

\* weekend

mp3 player or internet radio as alarm source.

Possibility to be awakened by a freely selectable wake-up call.

Automatically turns off after 1 hour.

**Internet radio**

10 pre-programmed internet radios, can be changed via web page.

Tone and Volume control.

Continuous operation or as an alarm.

Random mp3 player 5000+ mp3 files without problem.

What do we need

## Breadboard

## Hobby versie

If desired, stick 1 or more layers of foil (see 'what do we need' above) on the MAX7219 module to reduce the light intensity.

Go to <https://github.com/thieu-b55/ESP32-clock-radio-with-web-interface>

download het zipbestand : SD card files.zip en unzip.

download het programma : ESP32\_webradio\_WROOM\_wekker.ino

Copy the files you find in the SD card files folder to the SD card and place the SD card in the SD card holder.

Open the program ESP32\_webradio\_WROOM\_wekker.ino with the Arduino IDE.

Settings of the Arduino IDE see screen print. Port setting depends on your configuration.

Upload programma in ESP32-WROOM

On 1st use : connect to

network : **ESP32klok**  
password : **ESP32pswd**

9: weekdays 10: weekend

Tijd

Hour and minutes of alarm start

Mode

0 mp3 player. Make sure that the mp3 list has been created, see further in the manual.

1 internetradio

Wake\_up

0 geen wake\_up

1 if there is a file wake\_up.mp3 in the root of the SD card, it will be opened first before switching to mp3 player or internet radio

Acceptwith OK

### Radio/mp3 alarm of aan

+/- kiezen Alarm of Aan

Alarm radio/mp3 player plays when there is an alarm

Aan radio/mp3 player plays as long as On is selected. Alarms are not working now.

Silence alarm using push button connected to GPIO4 of ESP32

Alarm turns itself off after 1 hour

To switch off the alarm permanently, set the alarm to inactive.

### Set time zone summer/winter time

uren hours deviation from UTC time + or –

minuten minutes deviation from UTC time (0 or 30)

zomertijd 1 = summer time 0 = winter time

Accept with OK

## Light intensity

Klok helderheid (0 <-> 15)

Enter the desired brightness of the display here. Value from 0 to 15.

Accept with OK

## How does it work :

### Channel selection

**Choosing another channel when the radio is in Alarm mode is not always possible, it is best to put the radio in the On position before wanting to change channels.**

Radio 1 Classics is radio that is currently playing.  
If title and performer are available, they will be shown below.

selection box

Radio 1 Classics is now in the selection box, using the + and – button you can select another station.  
Accept with OK

In the selection list there is also the option to create mp3 list and mp3 player, more about this later in the manual.

### Volume en EQ

**L :** laag

**M:** midden

**H:** hoog

**V:** volume

L M H kan je instellen tussen -40 en 6

V kan je instellen tussen 0 en 21

bevestigen met <OK>

## Set channels

Instellen zender en url : 6

Radio 10 Non-Stop

http://playerservices.streamtheworld.com/api/livestreaan

- + OK

Already set channels or still empty positions can be changed as desired. Maximum channels that can be set is 10.

In the first box under <Set channel and url : ..> you can enter a random name for the channel.

The web address of the sender must be entered in the second box.

moving to a next or previous position is done with the <-><+> keys.

Accept with <OK>.

## mp3 speler.

*It is best to put the radio in the On position and not in the Alarm position before reading the mp3 files.*

Before listening to mp3 files, song lists must first be created.

With a large number of mp3 files, it is advisable to divide them evenly into different folders.

Starting from mp3\_0 and so on mp3\_1, mp3\_2.

These numbers must follow each other. Program stops searching if the following mp3\_X folder does not exist.

It is best to have about as many files in each mp3\_X folder as there are mp3\_X folders.

so with 900 mp3's this gives 30 mp3\_X folders with 30 mp3 files each.

SD program reads sequentially and in this way it takes the fewest number of reads to find the last mp3 file.

### Important:

**If this is not the 1st time you are making an mp3 list, you must first delete all songlistx folders from the SD card.**

Screenshot of SD card with mp3\_ folders that have not yet been imported.

mp3_0	32,8 kB map
mp3_1	32,8 kB map
mp3_2	32,8 kB map
mp3_3	32,8 kB map
mp3_4	32,8 kB map
mp3_5	32,8 kB map
mp3_6	32,8 kB map
mp3_7	32,8 kB map
mp3_8	32,8 kB map
mp3_9	32,8 kB map
mp3_10	16,4 kB map
pswd	20 byte plattetekst-document
ssid	14 byte plattetekst-document
totaal	4 byte plattetekst-document
zender_data.csv	4,9 kB CSV-document

Once you've copied all your mp3s to the SD card and deleted any songlistx folders, put the SD card back in its slot.

In the channel selection section go to <mp3 lijst maken> and press <OK>

Reading starts.

The program needs about 2 minutes per 1000 mp3 files if they are evenly distributed over several mp3\_X folders as described above.

The progress of the import can be followed by pressing the refresh circle at the top right of the web page.

After reading all mp3 files, the program switches to mp3 player

## Screenshot of the SD card after reading the mp3\_.. folders

### Important:

**to avoid a possible endless loop in the event of an error during mp3 playback, it will always start up as a web radio after a reset or power failure.**

So that was about it,  
greetings and happy listening,  
thieu-b55
